

Trust is not an option. It's standard.

Not that we think our competitors are lazy, untrustworthy, clueless businessmen, thinking no further than the next dollar. They just choose to focus on price and endless feature lists. And we respect that. Whatever package you choose with us, trust is a standard feature.

Trust in two of everything

Our hosting center is WebTrust™ certified - consultants from KPMG IT Risk Management constantly monitor everything, from customer service to hosting hardware.

One requirement is having two of everything; firewalls, routers, uninterrupted power supplies - even diesel generators and internet backbone providers are doubled.

So when you buy one, you actually get two. Just in case.

Reach us

Feeling safe also means knowing where you have us. You get a special phone number and email address to help you get in touch any time during the day.

To make sure you get the most competent, prompt answers to any question you might have, our technicians are not just friendly phoners. They're also a bunch of cool nerds.

And you'd be surprised to see how quick they answer your emails, too.

Enjoy the usability, exploit the possibilities

What good is an advanced system if you don't know how to use it? Our self-service control panel is intensively usability tested, intuitive and geared towards learn-as-you-use. Create, manage and, eventually, delete users, control FTP access, create mailboxes without even thinking twice about it.

Speaking of mailboxes - if Microsoft Outlook is your mail application, you'll definitely feel at home with the fully-featured, web-based Outlook 2003.

Tools that speak your language

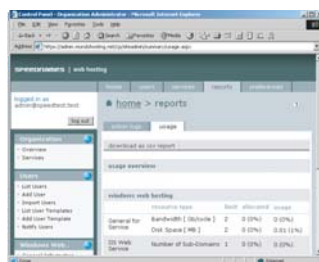

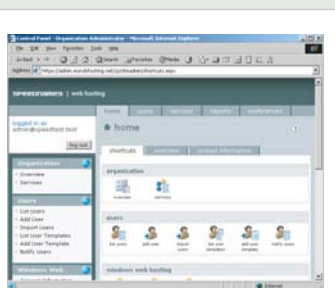

It's not that we don't think we're great developers. But with the capacities from Microsoft and Ensim, you're 100% sure that your hosting tools are the best on the market. Right now and in the future.

Ensim Unified control panel

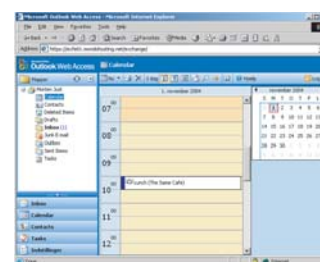

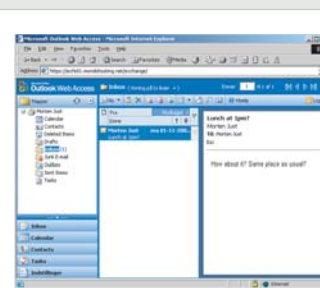

We're quite excited about this. The Microsoft-backed Ensim Unified system includes an advanced, easy-to-use control panel, that lets you manage virtually everything - in seconds. Create, change and remove users, mailboxes, settings and FTP accounts, customize error messages, database connections, monitor disk and bandwidth usage. It's all there, within a few clicks.

Carry your Microsoft Outlook everywhere

With the new Outlook 2003 WebAccess, Microsoft's latest email client for professional users, your email, calendar, tasks and contacts are with you anywhere you go. All you need is an internet connection and a browser. Any browser.

Manage FTP users, mailboxes, server settings, files from the Ensim Unified control panel

Outlook as you know it - now in your browser, too. Complete with calendar, tasks, and, of course, email.

Four packages, four needs. Find yours

Based on what our customers tell us about their needs, we put together these four packages of hosting ingredients. Where do you fit in?

Mail hotel

All you really need for now is email. You get web-based Microsoft Outlook and ten virtually spam and virus-free email accounts.

Economy

You need to get online with a static website to ensure your digital presence on the internet - with plenty of space for documents and images.

Standard

You need a dynamic, database-driven website, with half a gigabyte of storage and the powerful world of scripting technologies of both PHP and ASP.

Enterprise

You need the works. Plenty of room for multimedia, documents and databases, smoothly integrated with server-side scripting power from ASP, PHP - even ASP.NET.

If you need more email accounts with any package, just let us know.

Call or mail your account manager today to learn more about how our new hosting concept could fit your website. Find your local office here:

	Mail hotel	Economy	Standard	Enterprise
Space				
Server space	100 Mb	100 Mb	500 Mb	1.000 Mb
Email				
Email accounts	10	10	15	20
